Type 2151B...

NC Joining Module NCFH

with Hollow Shaft Motor and Compact Design

The NC joining module Type 2151B... (in two sizes) with integrated piezoelectric force sensor for nominal forces of 1 ... 60 kN is excellent for use in assembly and joining processes monitored by force displacement.

- Force feedback control
- High measuring accuracy in two ranges
- High velocity
- Active compensation of process compression for exact positioning
- No external PC with special software required
- Absolute encoder, eliminates reference point determination
- Low maintenance

Description

The NC joining modules NCFH Type 2151B... consist of a robust housing with the displacement sensor, integrated absolute encoder, piezoelectic tension/compression force sensor and charge amplifier. The compressive or tension forces that impact the sensor create a proportional electrical charge in the piezoelectric measuring element, which is converted into an analog voltage signal by the integrated charge amplifier.

The drive motor is an electrically commutated hollow shaft AC servo motor which is controlled by a servo amplifier. This servo amplifier provides constant speed independent of load. Standard functions like block pressing, position pressing and force feedback controlled pressing as well as intermediate positioning are supported.

The NC joining module NCFH can be operated with the IndraDrive servo amplifier in combination with maXYmos NC Type 5847A... The communication between IndraDrive and maXYmos NC takes place in real-time via SERCOS III. Several field bus slave interfaces are available onboard for customer controlling. PROFIBUS, PROFINET, EtherNet/IP or even EtherCAT can be used with the maXYmos NC at the customer's choosing. Quality data can be transmitted via the Ethernet interface through different protocols and a visualization via VNC® or a data backup can be performed.

Application

The NC joining module NCFH Type 2151B... is excellent for application in assembly and joining tasks in automated production plants.

Vertical and horizontal installation is possible and is performed by wall or flange assembly. Process tooling should be installed on the ram (please refer to Fig. 1 and 2).

Technical Data

Power supply	VDC	24 ±5 %

A bending of the plunger depending on the tool weight must be considered for a horizontal installation.

Comment about temperature:

According to the load profile the size 2 housing can heat up to 80 °C. Cycle time <10 sec please contact technical service.

Possible radial forces must be considered independent of the mounting. Tool weight must be reduced using with manual loading.

 $^{^{\}mbox{\tiny 2)}}$ Servo amplifier see accessories data sheet 003-125 Type 2180A...

Dimensions

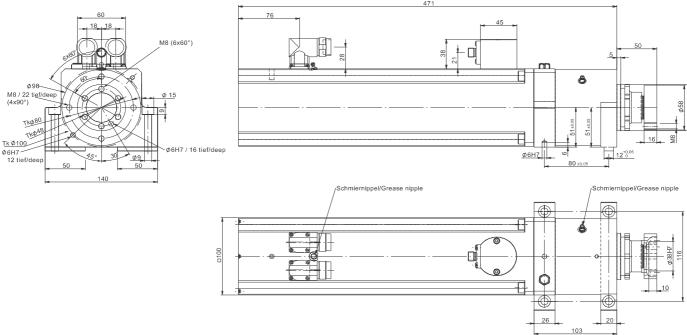

Fig. 1: Dimension NC joining module NCFH Type 2151B... size 1 for measuring range 1, 2, 5, 10 and 15 kN

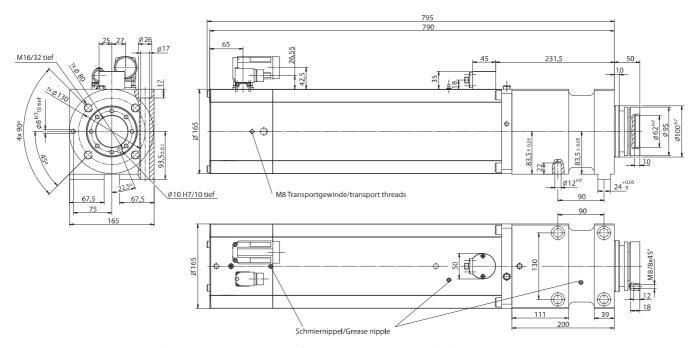

Fig. 2: Dimension NC joining module NCFH Type 2151B... size 2 for measuring range 15, 30 and 60 kN

The radial forces (for example due to the weight of the tool) must be considered for the installation. An external guide may have to be provided for the plunger.
